

server via a second communication network. The remote computer workstation is configured for specifying information to be communicated to the individual. The server includes a script program generator for generating a script program according to specified information. The present invention allows the remote computer workstation to be void of the large database and complicated processing that would have to be present in the central control station of Braun et al. and allows the remote computer workstation to be located at a distant site from the server.

Therefore, independent Claim 1 is allowable over the cited prior art. Since Claims 2, 4-6 and 8-12 depend from Claim 1, they are allowable for the same reasons that make Claim 1 allowable.

CONCLUSION

If the Examiner has questions or wishes to discuss any aspect of the case, the Examiner is encouraged to contact the undersigned at the telephone number given below.

Respectfully submitted,
